I know there are a ton of fans of Letter Quest: Grimm's Journey out there, and I appreciate that. I get the casual charm this title brings, and why people enjoy it. With that being said this title is too standard, the feel too mobile, and the core mechanic too old for me. Letter Quest: Grimm's Journey is a build-a-word adventure game built around mobile grind mechanics. It all works well enough, and if you get into it - you are gonna have a good time. The part that I get hung up on is that the core mechanic of building words is ages old, and frankly has been done to death. Even with some interesting variations thrown in, it just does not compel me. I do appreciate the mobile/lite RPG grind for loot and awards to add replayability, but to be fair the whole thing feels paper thin. Again, the problem here is that this title just isn't something that is for me - but I tried it and will weigh in for my Steam friends. If you are looking for a more progressive typing-based game, I'd check out Epistory - Typing Chronicles or maybe Typing of the Dead: Overkill . I'm not necessarily recommending them, but they have a bit more 'game', and bring a bit more freshness to the genre. Pros: +If you get into this, you'll have a fun time +The price-point is fair, and it is often on sale  
Cons: -There are many word-building typing-based games, and I fail to see what this one does that makes it stand out -Feels too mobile to me (both the interface and the grindy awards system) -I don't find it all that fun, frankly You know what this is. If you are on the fence, I'd suggest waiting for the frequent sale.
