Check the boxes next to the columns that you want to preserve in your XML output. Note that all boxes will be ticked as default. Click Next and then you are ready to start converting the file. The "Browse for a location" is optional and can be skipped, but it is recommended. If you do not select a location, the current folder will be used. When you are done selecting the columns, click Finish and check the XML output file. If you want, you can modify the tags and attributes for the node. You can even add other tags and attributes for compatibility with other tools. You can also change the XML output to look like the following: This is the default XML output. This is for backward compatibility with other tools and was used by previous versions of Transformer. Softsilver Transformer can now be used without a database. In this configuration, the XML output will be different. This is the default XML output. This is for backward compatibility with other tools and was used by previous versions of Transformer. This is how you would choose the default XML output in addition to changing the output like the following: You can specify many options of the tags and attributes for the node.
